

Ghana Hotel Management — User Acceptance Testing (UAT) Guide

Version: 1.0 · **Date:** June 2026

Production URL: <https://ghana-hotel-management.vercel.app>

Purpose

This guide helps testers walk through the main hotel processes on the **live deployed app** so nothing important is missed before the next development phase (database migration, etc.).

Time required: about 45–60 minutes per tester (one role focus).

Before you start

Item	Instruction
Browser	Use Chrome or Edge on a laptop (desktop layout). Avoid phone for first pass.
Private window	Open an Incognito / Private window so you start fresh.
Internet	Stable connection required.
Data note	Most operational data is stored in your browser for now. Another tester on a different device will not see your reservations unless they use the same browser profile. This is expected.
Screenshots	Take a screenshot for every problem (error message, blank screen, wrong total).
Feedback	Fill in the Feedback log at the end of this document (or a copy in Word/Google Docs).

How to report issues

For each issue record:

1. **Tester name**
2. **Date / time**
3. **Module** (e.g. Front Office, F&B, Accounting)
4. **Steps** (what you clicked, in order)
5. **Expected** vs **Actual**
6. **Severity:** Blocker / Major / Minor / Suggestion
7. **Screenshot** (attach if possible)

Test A — First visit & setup (everyone, ~10 min)

Goal: Confirm the app loads and initial setup works.

1. Open <https://ghana-hotel-management.vercel.app>
2. If redirected to **Setup**, complete the wizard:

- Hotel name (any test name, e.g. "Accra Demo Hotel")
- Country: **Ghana** (defaults for GHS, taxes, timezone Africa/Accra)
- Complete remaining steps and **Save / Finish**

3. Confirm you reach the **main dashboard** (sidebar navigation visible).
4. Open **Help** (sidebar or `/help`) — page should load without error.
5. Press **F12** only if instructed; otherwise skip developer tools.

Pass if: Setup completes, dashboard loads, no crash.

Fail if: Blank white screen, endless loading, or unrecoverable error.

Test B — Front desk: reservation → check-in → folio → checkout (~20 min)

Assign to: Tester playing **Front Office / Reception**

Navigation: Sidebar → **Front Office / Guest Services** → **Check-ins**

Direct link: <https://ghana-hotel-management.vercel.app/guest-services/check-ins>

B1 — Create a reservation

1. Go to **Reservations / Bookings** tab (or equivalent on Check-ins page).
2. Create a **new reservation**:
 - Guest name: `Test Guest [your initials]`
 - Room type: any available type
 - Arrival: **today**
 - Departure: **tomorrow** (1 night)
 - Status: confirmed
3. Save and confirm the reservation appears in the list.

B2 — Check in

1. Open **Today's Arrivals** (or arrivals panel).
2. Find your reservation and **Check in**.
3. Assign a **room number** if prompted.
4. Confirm status changes to **checked-in**.

B3 — Post charges to folio

1. Open the guest **folio** (in-house / billing view).
2. Add a charge, e.g. **Laundry** or **Minibar** — any amount (e.g. GHS 50).
3. Confirm folio **balance increases** (room charges may appear after night audit or per policy).

B4 — Check out

1. Go to **Check-outs** tab or checkout flow.
2. **Check out** the same guest.
3. Note **final folio total** (room + extras + tax if shown).
4. Record payment method (cash/card) if prompted.

Pass if: Full stay cycle completes without error; totals look reasonable.

Note for testers: Room revenue posts to accounting mainly at **checkout**, not at every folio click.

Test C — F&B POS: cash sale vs room charge (~15 min)

Assign to: Tester playing **Restaurant / Bar cashier**

Navigation: Sidebar → **Food & Beverage** → **POS** (F&B POS)

C1 — Walk-in cash sale

1. Start a **walk-in** (not in-house guest) order.
2. Add 2–3 menu items to cart.
3. Pay with **Cash** or **Card**.
4. Complete sale — confirm receipt/success message.

C2 — In-house room charge (important)

1. Start order for **In-house guest** (link to a checked-in room if available).
2. Add items to cart.
3. Pay with **Room Charge** (not cash).
4. Complete sale.

Pass if: Both flows complete.

Watch for (report if seen): Room charge **and** immediate accounting duplicate; balance looks wrong on folio after room charge.

Test D — Night audit & no-show (~15 min)

Assign to: Tester playing **Night Manager**

Navigation: Sidebar → **Front Office** → **Night Audit**

Settings (optional): **Room Configuration** → Operational Policies → Night Audit & Room Charges

D1 — Review settings

1. Confirm **Night audit auto-run** and **Post first night at check-in** toggles exist.
2. Leave defaults unless instructed (auto-run **on**, first night at check-in **off**).

D2 — Manual night audit

1. Open **Night Audit** screen.
2. Note current **business date** and in-house count.
3. Run **Night Audit** manually (button on screen).
4. Confirm success message / history entry (room charges posted count).

D3 — No-show (if arrivals available)

1. Create a **second reservation** for **today**, do **not** check in.
2. On **Today's Arrivals** or Reservations, use **No-show** (confirm dialog).
3. Confirm reservation status updates.

Pass if: Night audit runs without crash; no-show can be marked.

Known limit: Auto night audit at 1:00 AM only runs if someone keeps the **browser tab open** overnight.

Test E — Accounting (~15 min)

Assign to: Tester playing **Finance / Accounts**

Navigation: Sidebar → **Accounting**

E1 — Manual sales invoice (AR)

- 1. Open **Accounts Receivable**.
- 2. Create a **new sales invoice**:
 - Customer name: UAT Customer [initials]
 - Amount: e.g. GHS 1,000 + tax if applicable
- 3. Save as **Posted** (or post after save).
- 4. Confirm invoice appears in list with **Posted** status.

E2 — Customer receipt

- 1. Create a **receipt** against the invoice (or on account).
- 2. Amount: partial or full payment.
- 3. Confirm receipt saved.

E3 — Financial reports

- 1. Open **Financial Reports**.
- 2. Run **Income Statement** or **Trial Balance** (default date range OK).
- 3. Confirm report **renders** (numbers may be demo/zero — that is OK).

Pass if: Invoice, receipt, and report screens work without error.

Test F — Room configuration & rates (~10 min)

Assign to: Any spare tester or admin

Navigation: Room Configuration / Rate Management (sidebar under Front Office or Settings)

- 1. Open **Room Configuration**.
- 2. View **room types** and **operational policies** (night audit section).
- 3. Open **Rate Management** — confirm rates load for room types.

Pass if: Pages load; edits save without crash (optional: change a rate and revert).

Test G — Smoke checks (quick, anyone)

Open each URL — expect **200** (page loads, not “404 This page could not be found”):

URL	Expect
/	Main app
/setup	Setup wizard (or redirect if already done)
/help	Help content
/guest-services/check-ins	Check-ins hub
/management	Management view

Known limitations (do not log as bugs unless behavior differs)

- Data is **per browser** until cloud database (Supabase) is connected.

- Two testers overwriting each other on the **same browser** may confuse results.
- Some API calls require **tenant context** — server routes may return “Missing tenant header” in raw API tests; ignore unless seen in normal UI.
- **Lean mode** may hide some menu items in production.
- Reports may show **demo or empty** figures if no GL activity yet.

Feedback log (copy for each tester)

#	Module	Steps summary	Expected	Actual	Severity	Screenshot?
1						
2						
3						
4						
5						

Sign-off checklist

Test	Tester initials	Date	Pass / Fail
A — Setup			
B — FO stay cycle			
C — F&B POS			
D — Night audit			
E — Accounting			
F — Room config			
G — Smoke URLs			

Overall recommendation: ☐ Ready for next phase · ☐ Needs fixes first

Comments:

Send completed feedback to the project owner. Thank you for testing.
